FeedStation walk-in

Universal, modular and robust feed station

Searching for an easily installed and robust feeding station that can be extended with several successful innovations?

Then meet the new FeedStation walk-in from Hanskamp, which is easy to install into any type of cattle shed and can quickly be expanded. The FeedStation walk-in comes equipped with both a PipeFeeder and an ingenious anti-spill system developed by Hanskamp. This FeedStation can be coupled by every brand and is exlusive electronica.

Open design

A major benefit of the FeedStation Walk-In is that its open design ensures that the cow keeps in contact with the herd and does not feel isolated.

Universal

The FeedStation walk-in concentrate feeding station fits into any dairy unit and can be connected to any feeding computer. Installation of the FeedStation walk-in is quick and easy. The ingenuous, modular nature of the FeedStation walk-in means it is possible to link multiple feeding stations next to one another. This is done at a remarkably low cost as each additional feeding station only needs one sidebar.

Easy to expand with...

PipeFeeder

The FeedStation walk-in is supplied with a PipeFeeder dosator, which ensures pellets are fed precisely and silently. The feedstation can be expand up to 4 PipeFeeders.

L'port

Extra comfort with the L'port. With the L'port closing gate fitted the feeding station entrance closes so that it is no longer possible for a cow to be pushed away from the trough before she has finished eating her allotted ration.

MultiDos

To provide extra energy by feeding propylene glycol or other liquid concentrates on top of the concentrates a MultiDos dosing system can be quickly fitted above the feeding station.
