FeedStation walk-through

The cowfriendly feed station with exit on the front

The FeedStation walk-through is unique in terms of welfare, sustainability and cow comfort. The exit is at the front, allowing the cow to follow her natureal path and keep moving forwards.

Cow comfort

The FeedStation walk-through let the cow exit by the front. This means that not only can she protect herself with her head, but both feet and legs are less stressed. An added benefit is that cows lower in rank feel safer. The moment the FeedStation is closed the cow can eat her concentrates in peace.

How it works

A cow enters the feed station and get concentrates. The L'port (front) and T'port (back) are closing. Now the cow can fully pro-tect eat her concentrates in peace.The moment a cow is ready to leave, both gates are opening. The back gate opens slower thus ensuring the cow can leave the FeedStation safely by the front. After the cow left the feed station, the T'port (front gate) will close, so there never can enter a cow from the wrong side

Optimal cow flow

The open character of the FeedStation walk-through ensures each cow keeps in contact with the herd. Thus teaching them how to use this FeedStation is no longer necessary as cows see from each other how it works. When a cow walks out of the FeedStation through the front another cow can walk in from the back thus giving optimal cow traffic .
