BeddingCleaner

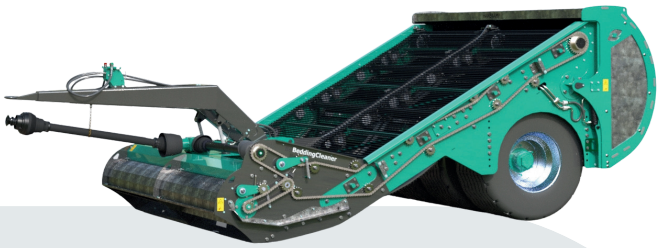
Efficient cleaning of bedding in the FreeLivingBarn

The BeddingCleaner scoops up the top layer of sand bedding, sieves out the manure, and lets the clean sand fall directly back onto the floor. This keeps the lying area clean and comfortable, while the manure is collected in the machine's collection bin.

See how the **BeddingCleaner** works here

The BeddingCleaner

- sieves the bedding and lets clean sand fall back
- efficiently removes manure from bedding
- helps improve hygiene, comfort, and cow health
- requires minimal maintenance thanks to durable components



- Removes manure quickly and efficiently
- Improves hygiene and animal welfare
- Suitable for sand
- Returns clean bedding immediately
- Robust design for years of use

Clean and Comfortable for Every Cow
The BeddingCleaner ensures a clean lying area by quickly and effectively removing manure from the FreeLivingBarn. The sieved, clean sand immediately falls back, so cows always have a dry and comfortable place to lie down. This reduces the risk of infections, hoof problems, and skin irritations, thereby improving the animals' health and well-being.

Higher Milk Yield and Better Air Quality
Clean bedding reduces stress and stimulates feed intake, contributing to higher milk production and better milk quality. By draining urine and separating it from manure, ammonia emissions are reduced, creating a healthier living environment for both the cow and the farmer.

Durable and Low-Maintenance Design
The BeddingCleaner must be towed by a minimum 70 hp four-wheel-drive tractor and is made from durable materials specifically selected for their suitability for sand applications. This makes the machine robust and reliable, while requiring minimal maintenance.
