ControlPanel

Stand-alone control for parlour feeding

The ControlPanel is a robust, user-friendly solution for precisely adjusting feed portions in the milking parlour. No transponders required, yet full control over feeding time and quantity.

See how the
ControlPanel works here

The ControlPanel

- allows easy setting of feed portions per station or per side
- displays real-time feeding progress on a clear touchscreen
- operates without transponders, ideal for enticement feed or targeted feeding
- is waterproof, durable and suitable for any milking parlour

- Stand-alone system for parlour feeding
- Operation per station or per side
- Fully waterproof and durable
- Easily adjustable settings
- Calm cows thanks to feed distribution throughout milking time
- Unlimited number of feed motors controllable

Individual Feeding Without Transponders
The ControlPanel enables targeted feeding in the parlour, either per indivual dosing unit or per side. It is perfect for farmers who prefer not to use transponders or who only wish to provide enticement feed. With its simple operation, feed portions can be adjusted at the touch of a button without interrupting the milking process.

Easy to Set and Adjust
The touchscreen is clear and intuitive, designed for practical use. It shows displays feeding progress in both time and quantity at a glance. The system automatically distributes feed throughout milking, ensuring calm cows and consistent feed intake. Settings such as pulse interval, portion size, display colour and language can be fully customised.

Robust, Waterproof and Practical
The ControlPanel is built to withstand tough conditions and operates reliably in all environments. Its housing is completely waterproof, and the controls provide vibration feedback when adjustments are made. The system can control an unlimited number of feed motors, making it suitable for both small and large parlours.
