FeedStation Mobile

Automatic and individual concentrate feeding during grazing

The FeedStation Mobile supplies individual concentrate portions throughout the day during grazing. This sustainable and mobile system helps reduce feed costs, improves animal welfare and, can be used both in the pasture and in the barn.

See how the
FeedStation Mobile works here

The FeedStation Mobile

- improves cow welfare by providing concentrate feed during grazing
- automates feed distribution and enables control over feed costs
- optimizes milk and meat production
- enables full remote control of feed distribution through smartphone, tablet, or computer

- Solar-powered
- 4G internet router
- Supports up to 2 feed types
- 2 or 4 feeding places
- Compatible with RFID transponders
- Controlled by Spider, which can be connected to a management system

FeedStation Mobile
The FeedStation Mobile enables individual and automatic concentrate feeding during grazing. This ensures high feed efficiency even outside the barn, giving each animal exactly what it needs.

Sustainable and Easy to Move
The station is mounted on a sturdy rolling axle, allowing it to be easily positioned in the pasture using a tractor or 4x4 vehicle. Its weather-resistant design is suitable for all seasons and features an integrated 2,230-litre silo. The silo can be conveniently refilled with a forklift or loader, to ensure continuous feed availability.

Smart, flexible and remotely controlled
The FeedStation Mobile accommodates two to four animals simultaneously and can dispense two types of feed. Solar panels make the system fully energy-independent. It is operated via the Spider feed computer, which can be controlled remotely via smartphone, tablet, computer, or a 4G router. Thanks to RFID identification, animals always receive the correct portion. The system can also be used in the barn by simply connecting it to the mains.
