FeedStation Walk-Through Pneumatic

Cow-friendly concentrate feeding station with forward cow exit

The FeedStation Walk-Through Pneumatic is a pneumatically operated feeding station that protects the cow during feeding. Cows exit at the front, allowing them to defend themselves and preventing unnatural movements.

See how the
FeedStation Walk-Through Pneumatic works here

The FeedStation Walk-Through Pneumatic

- prevents hoof strain due to forward exit
- enables smooth and calm transitions in the feed station
- prevents injuries and lowers stress when te cow rejoins the herd
- fits any barn, with standard dimensions and universal control compatibility

- Forward exit prevents unnatural movement
- Protects against udder bruising
- Cow changeovers are up to 10 seconds faster
- Calm environment thanks to enclosed feeding station
- Compatible with PipeFeeder, MultiDos and Black-V

Cow Flow and Comfort First
Designed with tranquillity and ergonomics in mind, the FeedStation Walk-Through Pneumatic follows the cow's natural forward movement, reducing stress and limiting hoof strain. While one cow exits, another can already enter, resulting in smooth, efficient transitions and consistent throughput.

Faster Changes, Less Stress
Changeovers are on average 10 seconds faster than conventional walk-in feeding stations, reducing waiting time and lowering stress. Once the cow has entered the feed station, the L'port Pneumatic at the rear and the pneumatically controlled T'port at the front close the station safely and automatically providing full protection for the cow throughout her stay.

Expandable to Suit Your Needs
The FeedStation Walk-Through Pneumatic comes standard with one PipeFeeder. Depending on your requirements, it can be expanded with additional PipeFeeders, a MultiDos for dosing liquid supplements or a Black-V for precise powder dosing. Its modular design makes it adaptable to any barn layout and compatible with all feed controllers.
