L'port Electric

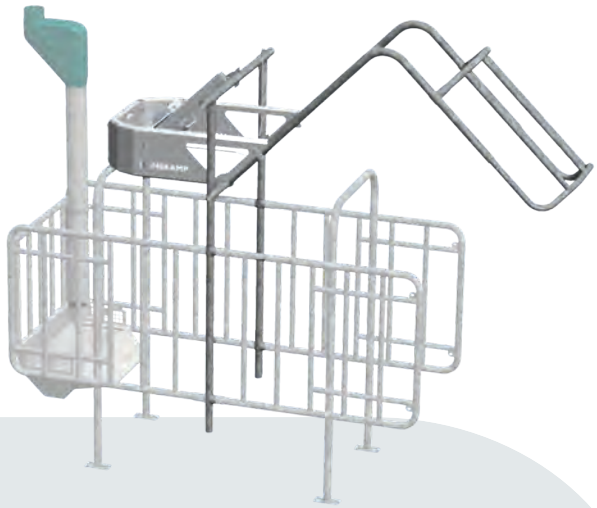
Protects the cow in the concentrate feeding station

Around the concentrate feeding station, it's usually hectic. Lower-ranking cows are often pushed away, leading to stress and an increased risk of udder injuries. The L'port Electric prevents this, bringing peace, safety and comfort to the barn.

See how the
L'port Electric works here

The L'port Electric

- ✓ closes automatically when a cow is entitled to concentrate
- ✓ ensures each cow receives the correct feed portion
- ✓ prevents intrusion in the feeding station and dominance conflicts
- ✓ fits most concentrate feeders



Ensures peace and safety during feeding

Protects against udder damage and resulting drop in milk yield

No compressed air required

Operates on 230V AC

Plug and play

Protection and Calm During Feeding
The L'port Electric closing gate ensures peace and safety in and around the concentrate feeding station. As soon as a cow is recognised and entitled to her feed, the gate closes automatically. This prevents intrusion in the feeding station, the chasing away of lower-ranking cows, and knocks to the udder, allowing every cow to eat calmly. A blow to the udder can cause lasting damage to the mammary glands, reducing milk production. The L'port Electric closing gate easily prevents this.

Smart Design and Safe Operation
The L'port Electric moves upwards and downwards, ensuring cow traffic is not obstructed. In the event of a power failure, a counterweight keeps the 'port Electric closing gate balanced, ensuring that a cow will never get stuck and can always leave the station safely. The smart current detection system recognises when a cow is beneath the L'port Electric. It then stops immediately, opens slightly and then closes again with adjusted force.

Silent and Fully Adjustable
When a cow starts eating, the closing gate closes silently and opens automatically as soon as the concentrate has been dispensed. The response time can be set in 10-second increments. This makes the L'port Electric efficient, safe and fully tailored to your farm.
