PipeFeeder HighSpeed works here

The PipeFeeder HighSpeed

- dispenses up to 5 kg of concentrate per cow in less than 2 seconds
- minimises feed waste and contributes to a calm milking parlour
- suitable for up to 4 feed types via HighSpeed Dump
- fits any rotary milking parlour and works with all feed computers

- Capacity of 20 kg/min per PipeFeeder
- HighSpeed Dump for up to 4 feed types
- Up to 1,320 g/second with combined dispensing
- Stainless steel housing for a long service life
- Compatible with all feed computers

Ultra-fast and precise feeding
The PipeFeeder HighSpeed is specially developed for fast and extremely accurate concentrate dispensing in the rotary parlour. With a capacity of 20 kg per minute (± 330 grams per second), each cow receives exactly the right amount of feed without slowing down the milking process. This ensures smooth cow flow and supports efficient farm management.

Flexibility for multiple feed types
With the HighSpeed Dump, the PipeFeeder HighSpeed can dispense up to four different feed types. The feed is collected in a DumpUnit, which can release large quantities at once – up to 1,320 grams per second. Ideal for farms that want to combine different rations or feed types.

Durable, quiet and compatible
Like the standard PipeFeeder, the HighSpeed features a robust stainless steel housing, accurate dosing and prevents feed waste. The quiet operating mechanism ensures a calm parlour environment. The PipeFeeder HighSpeed fits any rotary parlour and works with feed computers of any brand or type, making integration easy.
